Poly(A) RNA was purified, a cDNA library was made, and the cDNA clones were in vivo excised to give pBluescript SK phagemids in the TJ Close lab (Chin and Close) at the University of California, Riverside. Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0.0135

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   with XhoI for directional cloning into lambda ZAP Express vector. This lambda library was amplified once using E. coli host strain XLI Blue MRF'. Inserts were then subcloned by mass excision using ExAssist helper phage for conversion into phagemid vector pBK-CMV in E. coli host strain XLOLR. Sequenced using T3 primer: 5' ATT AAC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /note="Vector: pBK-CMV; Site_1: ECORI; Site_2: XhoI; This CDNA ilbrary was constructed from polyA+ enriched mRNA from zoospores grown in liquid medium. Zoospores were released into water and collected by centrifugation at 2,000g; zoospore-bearing sporangia were induced to develop on 5 to 7 d old mycelium colonies grown on VB agar by repeated flooding with water. Complementary DNA was synthesized from mRNA using an XhoI-poly(dT) linker-primer. ECORI adapters were ligated to the blunt-ended CDNA fragments and the products were digested
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       host strain XLOLR. Sequenced using CCT CAC TAA AGG GA 3'."

This GSS is part of a random genomic sequencing program of thirteen
yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii,
Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces
lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia
angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila,
Candida tropicalis and Yarrowia lipplytica. Genomic inserts of 3 to
5 kb were prepared and both extremities were sequenced. See
keywords for description of this sequence and for the sequence of
the other extremity of this insert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
